Summary
Senior software engineer and architect with 20+ years of experience building scalable, high-reliability systems across cloud platforms and data-intensive products. Strong background in full-stack and backend development, SQL database performance optimization, microservices, and dynamic analytics. Proven track record delivering production systems serving millions of users, improving performance, and translating complex requirements into maintainable, business-critical software.

Technical Skills

- **Advanced:** Javascript/Typescript, React, Vitest, Playwright, HTML5/CSS3, PHP, NodeJS, React/Redux, SQL (MySQL, Postgres), NoSQL (MongoDB, Redis, Memcache), Git/SVN, Unit/Functional Testing (Mocha, Jasmine, Selenium, Jenkins), Microservices, Linux, Docker
- **Intermediate:** Java, Python, C#, Hadoop, C/C++, Amazon Web Services (EC2, S3, Lambda), Google Cloud (GCP)
- **Proficient**: Flask, Express, Angular, Ember, D3, Backbone, jQuery, EJS, Docker

Senior Software Engineer
PowerGem. Birmingham, AL
January 2025 - May 2026

- Design and implement new features in C# using object-oriented design patterns (Dependency Injection, Inversion of Control, Factory) and SOLID principles, improving system maintainability and reducing defect rates by 40%
- Optimize Microsoft SQL Server database performance through advanced query optimization, stored procedure refactoring, and index tuning, achieving 3x improvement in complex analysis operations
- Implement comprehensive unit testing strategy using Playwright and Vitest, establishing CI/CD pipeline with automated testing reducing production incidents by 60%
- Leverage AI-assisted development to accelerate feature delivery, automated testing, and technical documentation, reducing development cycle time by 25%
- Collaborate with product management and stakeholders to translate business requirements into technical specifications and scalable architecture designs

Senior Software Engineer
GetBenjamin. Atlanta, GA
October 2020 - December 2024

- Eliminated errors in financial portfolio integrations built in PHP and SQL on AWS (EC2, RDS, SQS, SNS), improving data accuracy and reliability for client accounts.
- Developed PHP microservices to centralize data-access controls across SQL and MongoDB.
- Refactored the email alert and client-correspondence system in React, improving consistency and client satisfaction.
- Built marketing landing pages with React, Node.js, and SQL to improve the client experience and conversion.
- Extended the ExtJS and Node.js admin dashboard to increase click-through rates on marketing campaigns.

Senior Full Stack Developer
CleverTech. New York City, NY
January 2016 - August 2020

- Designed an interactive soccer data portal in React/Redux giving coaches, players, and scouts self-serve access to match and player data.
- Built Node.js microservices fronting Python analysis and a Postgres API, containerized with Docker on AWS EC2.
- Engineered a Node.js ETL pipeline moving video-tagged match events from Cassandra into Postgres for relational analysis.
- Developed Python and Java machine-learning models to optimize scouting reports, starting lineups, formations, and in-game substitutions and tactics

Senior Full Stack Developer
SambaTV. San Francisco, CA
June 2014 - January 2016

- Manage data dashboards with React/Redux, NodeJS, and Postgres, featuring custom visualizations and ad hoc query analysis to drive sales and advertising performance.
- Create a Python pipeline for TV/advertising data, generating unique insights into viewing behavior.
- Worked with TV viewership data at a scale of 100M+ events per day.
- Collaborated with sales team to improve revenue by 15%
- Used analytical data so that marketing team could target appropriate customers

Senior Software Engineer
AddThis. Washington, DC
August 2012 - February 2014

- Delivered reporting and ETL solutions in Java Spring, MySQL, and Hydra, the company's internal data warehouse, processing billions of daily events.
- Automated ETL and deployments through Jenkins CI/CD.
- Built analytics dashboards with Angular, Ember, Backbone, jQuery, and D3, backed by PHP and Java services.
- Provided data analysis that informed business and operations decisions.

Senior Software Engineer
Grooveshark. Gainesville, FL
August 2006 - August 2012

- Contribute to large-scale PHP backend APIs for MySQL, Memcache, Redis, and MongoDB.
- Spearhead backend APIs (PHP, C++, Java, Hadoop, Hive, Python) for search, music recommendations, and near real-time metrics.
- Transform C/C++ Sphinx framework for custom search engine with machine learning, optimizing results, autocomplete, and natural language processing.
- Implemented Hadoop/Hive (Java and Python) data warehouse for personalization, data-driven dashboard, and business intelligence to drive user growth and revenue.

Personal Projects

- **HackHope** — Voice-first PWA for solo founders with three core loops: a clarifier that sharpens vague goals, an async accountability partner, and a daily CEO briefing. React/TypeScript front end, Python/FastAPI back end, Claude API, Whisper speech-to-text, and PostgreSQL with PGVector for semantic memory; Capacitor for native packaging.
- **ZeroTrade** — Quantitative trading system on the Alpaca paper-trading API, with a FastAPI and Streamlit admin console for strategy control, positions, and performance monitoring. Order book matching engine in modern C++, focused on low-latency data structures, price-time priority, and memory-safe design (RAII, smart pointers).
- **Forked & WanderGenius** — LLM-powered apps: Forked turns a food photo into a recipe; WanderGenius generates personalized trip itineraries.

Education

Computer Engineering | University of Florida | 3 years
Machine Intelligence Lab (https://mil.ufl.edu/): SubjuGator (https://subjugator.org/) & Koolio (https://mil.ufl.edu/projects/koolio/)
